

AI USAGE DISCLOSURE

Student information

Name: Maria Alejandra Pabon Galindo
Matriculation number: 4756044
Project title: Conflict, not confidence: which value→RT mapping best describes probability discounting, and does RT help?
Group members, if applicable: Ashhad Raza Quadri, Saliq Neyaz, Maria Alejandra Pabon Galindo

AI use statement

Please tick one option:

☐ **No AI tools used.**

I confirm that I did not personally use generative AI tools, AI-based writing assistants, translation tools, image generators, code assistants, or similar AI systems in preparing my contribution to this project.

☒ **AI tools used and disclosed below.**

I confirm that I used AI tools only in limited and transparent ways that preserved the independent character of my work. I remain fully responsible for the accuracy, academic integrity, citations, methodology, code, analyses, and final submitted content.

Details of AI use

If no AI tools were used, write “Not applicable” in the first row.

AI tool used	Purpose of use	Parts of the project affected	Extent of use / student responsibility
Claude Code (Anthropic. Model: Claude Sonnet 5)	Assistance with reviewing, validating and debugging code I had drafted for the data pipeline and the parameter-recovery pipeline: diagnosing bugs, improving code and, once I confirmed the extension was an appropriate next step, drafting an additional recovery check under run B's task structure from a specification I reviewed and approved.	Data loading and cleaning. Parameter recovery. The M1 (linear-conflict) RT model's implementation within the shared model dispatcher and its associated recovery and plotting code.	AI reviewed and debugged routines I had specified and drafted; where it proposed a code change or an extension, I decided whether to adopt it and reviewed the result before running it myself. The choices, selection of hypothesis and implementation decisions are my own. I ran all code myself, checked its output to validate every new line of code, and understood it.
Claude Code (Anthropic. Model: Claude Sonnet 5)	Language and grammar correction and rephrasing of text I had already drafted myself.	My own paragraphs for data pipeline and parameter recovery / identifiability, and the corresponding passages of the development log and final report. Along with the parts completed through collaborative work and final verification	Wording and clarity. Every claim, number, argument and interpretation is my own; no passage was accepted without my review, and no substantive prose was generated from scratch by AI.

Prompt log

Did you retain a prompt log or notes documenting the AI-assisted steps?

- ☒ Yes, attached or available upon request.
☐ No AI tools were used.
☐ No prompt log was retained. Explanation: [explanation]

Individual contribution and responsibility

Briefly describe your own contribution to the project, including report writing, coding, modelling, analyses, figures, or interpretation of results:

I owned the data pipeline (Sec. 2.1), RT model M1 ($\mu = a - b|\Delta V|$, linear conflict), and parameter recovery (Sec. 3.1).

Data pipeline. Built and validated the loader, cleaning rules, and derived θ /scale columns; discovered that run A ($\theta_{cert} \equiv 0$, sure-vs-risky) and run B ($\theta_{cert} > 0$, risky-vs-risky) are not the same task, requiring both options to be discounted identically.

M1. Specified, fit, and evaluated it, including different analysis against M1 and M3.

Parameter recovery. Built the simulator and paired recovery loop, the τ - a identifiability diagnostic, and the run-B-structure recovery extension (Sec. 3.1), showing h remains recoverable but modestly worse than under run A.

Drafted the report text for Sec. 2.1, the M1 parts of Sec. 2.2, and Sec. 3.1, plus corresponding passages of Sec. 3.4 and Sec. 4.

The work was divided equally in three. Shared components – the Rachlin hyperboloid valuation model and logistic choice rule, the shifted log-normal RT distribution, the model-comparison framework, the figures and this report – were developed jointly, and I reviewed and accept responsibility for the parts I contributed to.

In the case of a group project, I confirm that I have reviewed the shared report, code, analyses, and figures to which I contributed. I accept responsibility for my own contribution and for any AI-assisted material included in shared components that I reviewed, used, or submitted as part of the project.

Final confirmation

I confirm that I have not submitted AI-generated content as my own without review, verification, and disclosure. I have checked all factual claims, references, data, code, analyses, and interpretations myself. I have not entered sensitive, personal, confidential, or copyright-protected material into AI systems in violation of data protection, copyright, or course rules.
