

AI USAGE DISCLOSURE

Student information

Name: Ashhad Raza Quadri
Matriculation number: 4756039
Project title: Confidence, not conflict: which value→RT mapping best describes probability discounting, and does RT help?
Group members, if applicable: Ashhad Raza Quadri, Saliq Neyaz, Maria Alejandra Pabon Galindo

AI use statement

Please tick one option:

☐ **No AI tools used.**

I confirm that I did not personally use generative AI tools, AI-based writing assistants, translation tools, image generators, code assistants, or similar AI systems in preparing my contribution to this project.

☒ **AI tools used and disclosed below.**

I confirm that I used AI tools only in limited and transparent ways that preserved the independent character of my work. I remain fully responsible for the accuracy, academic integrity, citations, methodology, code, analyses, and final submitted content.

Details of AI use

If no AI tools were used, write “Not applicable” in the first row.

AI tool used	Purpose of use	Parts of the project affected	Extent of use / student responsibility
Claude (Anthropic), via the Claude Code CLI, July–August 2026	Secondary advice: a second opinion on decisions I had already taken, and help understanding error messages while debugging my own code (M1’s motivation, my cleaning rules, the behaviour of the recovery simulation)	The modules I own: RT model M1 (linear conflict, $\mu = a - b \Delta V $), the data pipeline (loading, cleaning, quality diagnostics, run A vs run B comparability) and the parameter-recovery simulation	Advisory only. I wrote, ran and tested all code and took every modelling decision myself; nothing AI-suggested entered the project unchecked. The numbers, figures and conclusions are mine and I can reproduce and explain them
Claude (Anthropic), via the Claude Code CLI, August 2026	Language and formatting correction: rewriting em-dash constructions, shortening the abstract to the 250-word limit, LaTeX formatting	Report prose (report.tex): the abstract and isolated sentences in Sections 1–4. No numerical results or figures altered	Wording and length only. The shortened abstract restates results already in our Results section; I checked every edited sentence against the result it reports

Prompt log

Did you retain a prompt log or notes documenting the AI-assisted steps?

- ☒ Yes, attached or available upon request.
- ☐ No AI tools were used.
- ☐ No prompt log was retained. Explanation:

Individual contribution and responsibility

Briefly describe your own contribution to the project, including report writing, coding, modelling, analyses, figures, or interpretation of results:

I owned **RT model M1 (linear conflict, $\mu = a - b|\Delta V|$)**: its specification, psychological motivation, fitting and evaluation. I also built the **data pipeline** (loading the MATLAB files, cleaning, the per-participant quality diagnostics and the run A vs run B comparability analysis) and the **parameter-recovery simulation** (simulator, generating ranges, recovery statistics and the recovery matrix).

The work was divided equally in three. Shared components – the valuation model and choice rule, the shifted log-normal RT distribution, the model-comparison framework, the figures and this report – were developed jointly, and I reviewed and accept responsibility for the parts I contributed to.

In the case of a group project, I confirm that I have reviewed the shared report, code, analyses, and figures to which I contributed. I accept responsibility for my own contribution and for any AI-assisted material included in shared components that I reviewed, used, or submitted as part of the project.

Final confirmation

I confirm that I have not submitted AI-generated content as my own without review, verification, and disclosure. I have checked all factual claims, references, data, code, analyses, and interpretations myself. I have not entered sensitive, personal, confidential, or copyright-protected material into AI systems in violation of data protection, copyright, or course rules.
